

PRODUCT DESCRIPTION

Permacolour Colour Wash is a coloured acrylic compound used mainly on horizontal concrete and masonry surfaces to add a highlighted transparent colour to the finished product.

- Concrete floors, coloured or ground
- Imprinted concrete where clear liquid release was used or coloured Liquid Release was washed out
- Imprinted concrete where powdered release was not strong enough
- Exposed aggregate
- Permacolour overlay finishes

The Colour Wash may be coated with Permacolour clear sealer to prevent fading and wear. Use Permacolour Concrete Sealer for exterior and Permacolour Ureglaze for interior finishes. These are a very cost effective method for colouring surfaces or adding highlights for visual effects.

APPLICATION INSTRUCTIONS

- Prior to applying Permacolour Colour Wash, all hard trowelled concrete should be acid washed.
- Mix 1 part of Colour Wash to 38 parts of water (250mls to 19litres of water). This is a guide only, you can add more or less depending on the depth of colour required, but we recommend starting with a smaller amount and add as required.
- Dampen down area to the stage where it is just about to puddle.
- Pour Colour Wash on the concrete surface using a watering can or bucket.
- Use a squeegee to spread the Colour Wash over the area. It is best to do a small test area first to make sure you have the colour at the required strength and adjusting it accordingly before applying to a large area.
- Once completely dry the surface can be coated with the appropriate Permacolour Concrete Sealer.

CLEAN UP

Clean all equipment with water immediately after use, otherwise the product will be hard to clean off.

WARRANTY

Permacolour products are warranted for one year after date of purchase. Please refer to the Limited Material warranty for additional clarification.
