

Micro Topping

November 2016

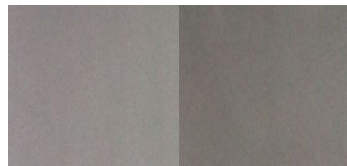

Permacolour Micro Topping is a coloured cement based floor topping, applied by trowel to produce a smooth, slightly mottled, thin set finish, for new or existing residential and light commercial surfaces. Designed to provide a durable and decorative finish for all internal surfaces only.

Micro Colour

Permacolour Micro Colour is a thin, coloured cement based plaster that creates a smooth, mottled finish and is an aesthetically pleasing alternative to paint, wall paper and other conventional internal wall finishes.
